

INNOVO Spearheads Climate Action with Operational Bio-refinery

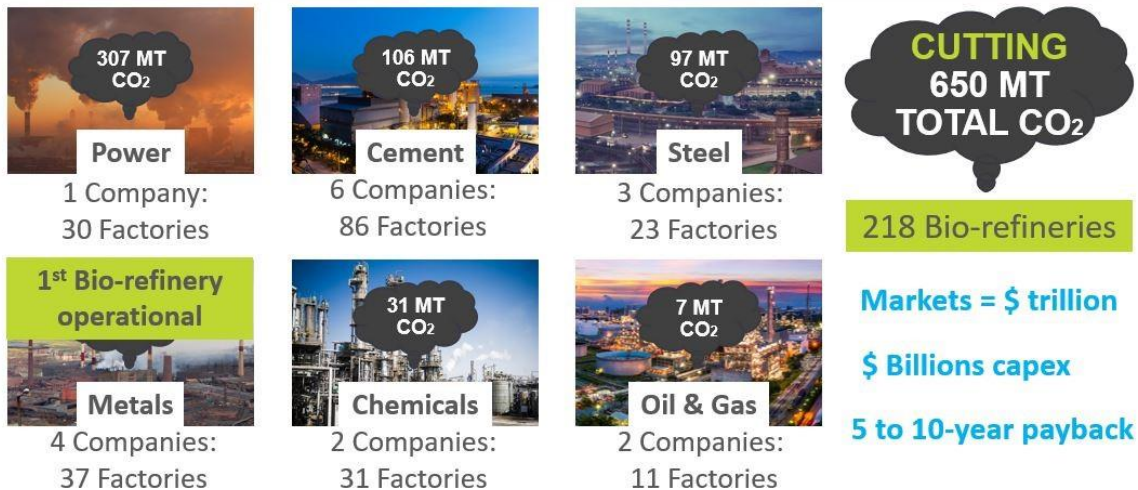

INNOVO's Sustainable Vision Comes to Fruition, Pioneering a Profitable Net Zero Future

New York, NY – February 23, 2024 -- INNOVO_ Profitable Net Zero has reached a pivotal milestone in its mission to combat global warming, announcing the successful launch of its first bio-refinery. This facility is the first of 218 planned bio-refineries_to progressively eliminate CO2 emissions from heavy industries such as steel, cement, power, and chemicals. They_showcase INNOVO's commitment to a greener future. By converting CO2 emissions into valuable products, INNOVO's operational bio-refinery is not just a testament to environmental responsibility but also a beacon of economic innovation.

The bio-refinery, which already shows promise in reducing CO2 emissions substantially, aligns with the commitments from various heavy industries to achieve a net-zero footprint. INNOVO's strategic partnerships are set to reduce 650 million tonnes of CO2, leveraging proprietary technology that transforms emissions into commercially viable products, such as biofuels and other biochemicals.

As the world grapples with the climate crisis, INNOVO's pioneering work offers a scalable and profitable solution, reducing emissions while fostering industrial growth. With this first operational bio-refinery, INNOVO invites investors and industry leaders to join this revolutionary journey, marrying sustainability with economic growth to pursue a cleaner planet.

1st Bio-refinery Operational; 217 Bio-Refineries at 18 Companies Committed Subject to Contract & Finance
